
KRIVJET

Research Institute for developing citizens' vocational skills and competencies to **create dynamic economies** and **happy societies**

Welcome to the Korea Research Institute for Vocational Education and Training (KRIVET). My name is Hye Won Ko and I am the proud president of KRIVET, the hub of policy research in TVET in Korea

KRIVET is a national research institute under the Korea Prime Minister's Office. Since its establishment in 1997, KRIVET has conducted research projects on TVET policies and qualifications systems, developed VET programs and contents and disseminated the findings and outcomes.

KRIVET

Our entire members are dedicated to fostering a rigorous research environment that responds to various socio-economic changes such as digital transformation, and demographic and industrial structural shifts. Our staff diligently pursues research projects that inspire citizens to cultivate lifelong vocational competencies and employability skills and support workplace learning tailored to their different life stages aligning with demands for national strategic plans.

We will strengthen research initiatives to contribute to creating good occupations and building a society where citizens are happy.

Through the rich experiences over the past 27 years, KRIVET is in the midst of a remarkable period of growth and development. We will continuously evolve into a comprehensive government research institution focused on human resource development.

Thank you for your support!

Sincerely,

Hye Won Ko (Ph.D.) KRIVET President

Management Objectives

To improve policy research in response to industrial transitions population decline and other pressing issues and foster social mobility

To improve policy research on optimized TVET for sustainable education and employment corresponding to all life stages

To advance the system for research projects by strengthening the cooperative network

To establish innovative management and foster a cooperative organizational culture

We research lifelong vocational education policies and systems to enable all citizens to develop their employability skills and competencies

- Lifelong vocational education policies and systems
- Vocational education including specialized high schools and tertiary TVET institutions
- Research and program development for Meister high schools and policies
- Policies and systems related to apprenticeship schools

We realize a substantive lifelong learning society through the research on education-employment linkage

- Linkage between education and employment
- Development of National Competency Standards (NCS) learning modules
- Job skills and qualifications
- Establishment and operation of the Korea National Qualification Framework (NQF)

Future Human Resources and Career Research

Lifelong Vocational Education Research

Employability Skills Development Research

Education-Employment Linkage Research

International Collaboration for Research on TVET

Through research aimed at enhancing the competitiveness of human resources, we strive to improve the quality of life for citizens and, ultimately, contribute to enhancing national competitiveness

- Industry-specific workforce supply outlook and analysis
- Future human resources development
- Social policy agenda development
- National career education and lifelong career development support

We lead the enhancement of vocational skills development in response to socio-economic changes

- Vocational skills development policies and systems
- Analysis of employment, labor market, and vocational skills development
- Research, development, and support for work-integrated learning
- Human capital development for industries or local regions

We support the advancement of vocational skills development through the dissemination of research outcomes via global networks

- Collaboration and support for international joint research projects
- International cooperation project advisory and support
- Support for Official Development Assistance (ODA) research projects.
- Co-hosting the Annual Global HR Forum
